

ABDULLAHI ABDULLATEEF

Technical Consultant | Python | JavaScript | Financial Markets | Process Automation | RegTech
+447459423651 | awale905@gmail.com | UK | [LinkedIn](#) | [GitHub](#) | careermentorlab.com

PROFESSIONAL SUMMARY

First-Class Software Engineering graduate with strong Python and JavaScript skills, hands-on experience automating data workflows and building production systems, and a genuine background in financial markets. I actively trade forex, indices and crypto, have built automated trading systems in MQL5 on MetaTrader 5, and I understand how financial processes work from the inside. I am comfortable working with senior stakeholders, translating complex requirements into scalable technical solutions, and maintaining high standards of accuracy and compliance across deliverables. I am analytical, detail-oriented and genuinely excited by the intersection of technology and finance that this role sits at.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL, MQL5, Java, HTML5, CSS3

Automation and Scripting: process automation, workflow scripting, data pipeline development, template logic, API integration, algorithmic rule-building

Frameworks and Tools: React, Next.js 14, FastAPI, Flask, Spring Boot, Docker, GitHub Actions, CI/CD, Git, Jira, AWS, Vercel

Databases: PostgreSQL, MySQL, MongoDB, SQLite, Supabase, SQLAlchemy ORM

Finance and Markets: MetaTrader 5, MQL5, forex, indices, crypto, XAUUSD algorithmic trading, risk management systems, financial data analysis

Communication: stakeholder requirements gathering, technical documentation, cross-functional collaboration, presenting complex concepts clearly

WORK EXPERIENCE

Data Analytics Intern | Amdari

Oct 2025 – Feb 2026

- Analysed existing manual reporting workflows and identified areas for automation and optimisation, then designed and implemented Python scripts that reduced manual effort by 30% and improved data accuracy by 20%.
- Collaborated with cross-functional stakeholders to gather requirements, understand business needs and translate them into structured technical solutions, producing clear documentation throughout.
- Built and maintained reporting templates and dashboards in Power BI, Tableau and Looker Studio tracking 10 or more KPIs, ensuring consistency, accuracy and compliance with agreed standards across all deliverables.
- Managed workstreams using Jira-style workflows, maintaining accurate records and adhering to internal processes and quality standards throughout.

Software Development and AI Engineering Intern | Headstarter AI

Jul 2024 – Aug 2024

- Collaborated with senior developers and project leads to deliver automation tooling on a live platform serving over 1,000 users, taking requirements from scoping through to deployment.
- Built and enhanced automation scripts in Python that reduced manual data processing time by 40%, applying structured logic to replace repetitive manual workflows.
- Communicated with both technical and non-technical stakeholders under the guidance of a senior team lead, providing clear updates on progress and handling requirements discussions professionally.
- Maintained high quality standards across all deliverables, following internal development processes and CI/CD pipelines with consistent attention to detail.

FINANCE AND AUTOMATION PROJECTS

GoldDayTrader EA (MetaTrader 5) (MQL5, algorithmic trading, XAUUSD, automated rule logic)

- Designed and built a fully automated Gold trading system from scratch in MQL5, implementing a multi-factor confluence scoring engine that evaluates several conditions before generating a trade signal. The system applies structured rule logic to live market data in real time — directly analogous to the template automation and scripting work described in this role.
- This project demonstrates my ability to translate a complex, multi-condition business process into clean, reliable automated logic that operates consistently without manual intervention.

FTMO Daily Loss Alert EA (MQL5, MetaTrader 5, SMTP2GO API)

- Built a compliance monitoring system that tracks real-time profit and loss against defined risk thresholds and fires automated alerts via the SMTP2GO API when limits are approached. Designed to operate entirely without manual oversight, ensuring regulatory compliance is maintained automatically.

AI Career Mentor (careermentorlab.com) *(Python, FastAPI, JavaScript, React, PostgreSQL, Docker, AWS)*

- Independently designed and deployed a full-stack automation platform, building RESTful APIs, integrating third-party data sources, implementing automated document parsing pipelines and deploying to production on cloud infrastructure.
- The project required translating complex multi-step workflows into scalable automation logic, maintaining accuracy and consistency across all outputs, and operating to production-grade quality standards throughout.

Financial Investment Assistant *(Python, FastAPI, scikit-learn, MySQL)* **Final Year Project**

- Built a quantitative data processing system handling 50,000 or more financial transactions, applying regression models to generate structured analytical outputs demonstrating the ability to work with financial data at scale and produce reliable, accurate results.

EDUCATION

BSc Software Engineering, First-Class Honours | *University of Leicester* Sept 2022 – Jun 2025

Relevant modules: Software Architecture, Algorithms and Data Structures, Database Systems, Web Development, Machine Learning, Artificial Intelligence, Information Security

Engineering, D*D*D | *Westminster Kingsway College* Sept 2019 – May 2022

CERTIFICATIONS

- **Google Data Analytics Professional Certificate** (Google/Coursera)
- **Python for Data Science, AI & Development** – 2026 (IBM/Coursera)
- **Applied Software Engineering Fundamentals** – 2025 (IBM/Coursera)
- **Foundations of User Experience (UX) Design** – (Google/Coursera) | May – Jun 2021
- **Data Processing & IT** – ISP Computer Institute Nigeria | 2016
